

## WATER WATCH REPORT

April 17, 2023

	Сара	acity	Current Usable	Percent Full							
	(acre	-feet)	Contents		Last	Historical					
Reservoir	Total	Usable	(acre-feet)	Current	Year	Median					
Antero	20,122	20,067	20,064	100%	98%	99%					
Eleven Mile	97,779	97,779	99,589	102%	102%	102%					
Cheesman	79,064	79,064	64,140	81%	74%	87%					
Marston	19,108	13,133	6,956	53%	46%	66%					
Strontia Springs	7,863	7,163	6,133	86%	85%	94%					
Chatfield	28,709	12,415	11,628	94%	64%	94%					
Dillon	257,304	249,095	196,643	79%	77%	86%					
Gross*	41,811	29,811	5,506	18%	54%	27%					
Ralston	10,776	7,276	5,140	71%	18%	62%					
Meadow Creek	5,370	4,520	-	0%	67%	12%					
Total	567,906	520,323	415,799	80%	79%	79%					

### **Supply Reservoir Contents**

\*Gross Reservoir storage is limited to 29,938 acre feet in total storage during construction activities. The percent full figures are based on the normal usable capacity of 29,811 acre feet.

## **Supply Reservoir Contents**

Note: Denver Water forecasts seasonal reservoir storage contents under dry future weather, normal future weather and wet future weather scenarios.

Gross Reservoir storage is limited to 29,938 acre feet in total storage during construction activities. The percent full figures are based on the normal usable capacity of 29,811 acre feet.

# **April Precipitation**

#### **CUMULATIVE PRECIPITATION: COLORADO RIVER WATERSHED**

Data are from the 7 SNOTEL stations above Denver Water's Upper Colorado diversion facilities.

## **Snowpack: Colorado River Watershed**

Data are from the 7 Snotel stations above Denver Water's Upper Colorado diversion facilities.

	Denver Water Use and Reservoir Contents 2023														
			Jan	Feb	Mar	Apr	Мау	Jun	Jul	Aug	Sep	Oct	Nov	Dec	YTD-Avg
Predicted End-of-Month Supply F	Resei	rvoir				422 200									
Contents (Full = 518,449 AF)						422,200

% of 2023 Expected Daily Use			109%	112%	106%	95%									106%

#### April 17, 2023

Notes: 1) "AF" denotes acre-feet. "MG" denotes million gallons. 2) Expected Daily Use is based on historical use with normal weather conditions. 3) The predicted end-of-month supply reservoir contents figures assume normal weather after April 3<sup>rd</sup>, 2023. 4) The differences between predicted and actual end-of-month supply reservoir contents are the result of normal estimation error of daily use, supply, evaporation, carriage losses and raw water deliveries. 5) Predicted supply reservoir contents last updated on April 3<sup>rd</sup>, 2023. 6) Daily water figures are subject to change.

## Lake Powell Report\*

<sup>\*</sup> Denver Water gets half of its water supply from the Colorado River and closely monitors conditions at Lake Powell and within the greater Colorado River Basin.
